

Basic Information:

Experiment No: 03

Date:

Title: Write a java program which reads marks of five subjects through command line and print the total and average.

Objective /Aim:

To develop a Java program that accepts the marks of subjects from the user, calculates the total marks and average marks, and displays the results.

System Requirements:

Hardware:

- > Standard PC/Laptop
- > Intel Core i3/i5 processor or equivalent
- > Minimum 4 GB RAM
- > Minimum 500 MB free

Software:

- > Operating System: Windows / Linux / macOS
- > Java Development Kit (JDK 17 or JDK 21)
- > Text Editor or IDE such as Eclipse, IntelliJ IDEA, NetBeans, or VS Code
- > Command Prompt / Terminal

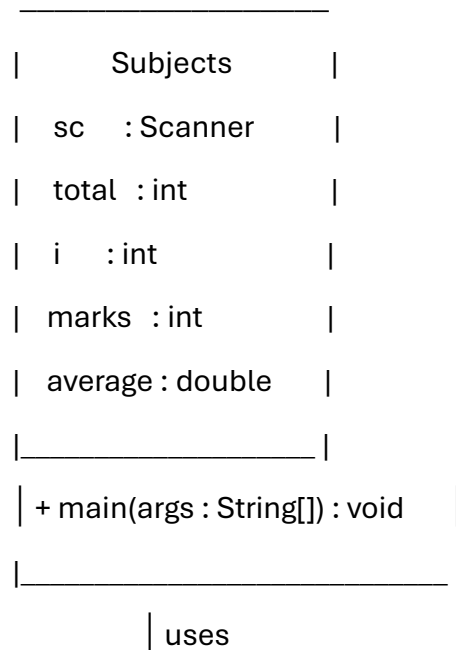

Algorithm/Logic Description:

1. Start the program.
2. Import the Scanner class to accept input from the user.
3. Create a Scanner object.
4. Initialize total = 0.
5. Use a for loop to read the marks of each subject.
6. Add each subject's marks to total.
7. Calculate the average marks using the total marks.
8. Display the total marks.

9. Display the average marks.

10. Stop the program.

UML Class Diagram:

Source Code:

```
package record;

import java.util.Scanner;

public class Subjects {

    public static void main(String[] args) {

        // Create Scanner object to take input from the user

        Scanner sc = new Scanner(System.in);

        // Variable to store the total marks

        int total = 0;
```

```
// Loop to enter marks for the subjects
    for (int i = 0; i <= 5; i++) {
        // Ask the user to enter marks
        System.out.println("Enter marks of subject " + i);
        // Read the marks from the user
        int marks = sc.nextInt();
        // Add the marks to the total
        total = total + marks;
    }
// Calculate the average marks
    double average = total / 5;
// Display the total marks
    System.out.println("Total Marks = " + total);
// Display the average marks
    System.out.println("Average Marks = " + average);
// Close the Scanner
    sc.close();
}
}
```

Output Screenshot:

```
<terminated> Subjects (Java Application) C:\Program Files\Java\jdk-25.0.7\bin\javaw.exe (24-Sept-2026, 12:01:43 pm - 12:01:56 pm elapsed: 0:00:12) [exit: 25900]
Enter marks of subject0
00
Enter marks of subject1
95
Enter marks of subject2
88
Enter marks of subject3
92
Enter marks of subject4
96
Enter marks of subject5
94
Total Marks = 579
Average Marks = 115.8
```

Result:

The Subjects Java program was successfully implemented and executed. The program accepts the marks of the subjects from the user, calculates the total marks by adding all the entered marks, and then calculates the average marks. Finally, it displays the total and average marks on the screen.
